**Mazu Networks Announces Availability of White Paper on Reducing the Burden of Regulatory Compliance**

*Final White Paper in Mazu Networks Series on the Security Benefits of NBA Provides Readers with Insight on How to Achieve Compliance Readiness While Minimizing Business Impact*

---

**CAMBRIDGE, MASS.** - August 27, 2007 - Mazu Networks, the [leading](#)(1) provider of Network Behavior Analysis (NBA) systems, today announced the final white paper in the company's series on the security benefits of NBA. The paper titled, "Reduce the Burden of Regulatory Compliance," provides enterprises with practical information on how NBA systems enable enterprises to better establish and enforce policies to contend with growing industry regulations.

In "Reduce the Burden of Regulatory Compliance," Mazu Networks discusses the challenges in achieving and maintaining regulatory compliance while minimizing the impact on resources and business operations. The paper discusses how through the network visibility that NBA systems provide, security teams gain the information they need to: develop network inventory with dependencies and usage; protect regulated systems from unauthorized access; respond to auditor requests; and develop and enforce policies. NBA solutions provide this level of visibility by analyzing network traffic data from an organization's routers and switches and continuously building a profile of the behavior of systems, users and applications inside the network.

"Compliance efforts in most organizations are inefficient at best and security teams are in desperate need of a solution to help address regulatory requirements in a programmatic way," said Paul Brady, CEO, Mazu Networks. "The latest white paper in our series discusses how NBA systems can help security teams implement a sustainable and cost-effective process to ensure that their company complies with any mandated industry regulation."

The complete Mazu Networks white paper series focuses on the four core areas in which NBA can provide significant value to security operations. These areas include: detecting unauthorized activities, users, applications or hosts; resolving incidents 7-10x faster; detecting/stopping internal threats and malware; and establishing/enforcing policies to reduce the cost of compliance."

For more information on the Mazu Networks white paper series or to download a free copy of "Reduce the Burden of Regulatory Compliance" visit: <http://www.mazunetworks.com/news-events/white-paper-series.php>. Also available on this site are Mazu Networks' previously released security papers, which include, "Four Things You Don't Know about Your Network that Put You at Risk," "Resolve Security Incidents 7-10x Faster" and "Protect the Network Core from Internal Threats and Malware."

Part one of the white paper series, which focuses on the network operations benefits of NBA, is also available online. The papers in the network operations series include:

- **"Troubleshoot Network Performance Issues 7-10x Faster"** - This paper provides information on how NBA systems fill gaps left by traditional solutions and provide enterprises with complete network visibility of performance issues, security events and policy violations.
- **"Reduce the Headache of Infrastructure Change in Five Steps"** - This paper provides information on the five opportunities Mazu provides to enable the optimization and acceleration of infrastructure change.
- **"Detect Behavior Changes That Affect Performance Before They Disrupt Users"** - This paper provides information on how enterprises can maintain constant network performance by identifying and preventing issues that could disrupt normal business operations.
- **"Analyze WAN Usage to Improve Availability and Reduce Cost"** - This paper provides information on how through improved network visibility, enterprises can optimize WAN usage.

**About Mazu Networks, Inc.**

Mazu Networks provides continuous global visibility into how users, applications, hosts and devices are behaving on a network, and detects if there are meaningful changes from their typical behavior that indicate a network performance issue, a security threat, or an application problem. Through Mazu, enterprises understand usage patterns, consumption rates and dependencies between users, applications and network infrastructure. Only Mazu offers continuous global visibility; passive, agent-less deployment, automatic and custom behavior analysis; and superior integration with network and security products. Mazu Networks' customers optimize their network infrastructure to support their business, secure their internal networks and maximize application availability.
